

Re. : Response to Advisory Office Action Mailed December 1, 2005
Appl. No. : 10/722,664
Filed : November 25, 2003

I. AMENDMENTS TO THE CLAIMS

The following listing of the claims replaces all prior versions and listing of the claims in the application:

1. (Currently Amended) A basketball goal assembly comprising:

a backboard including a front portion forming at least a portion of a rebound surface, a generally opposing rear portion, and a perimeter including a first portion disposed on a first side of the backboard and a second portion disposed on an opposing second side of the backboard;

a first weight;

a first receiving portion in the first side of the backboard, the first receiving portion being sized and configured to receive at least a portion of the first weight;

a second weight;

a second receiving portion in the second side of the backboard, the second receiving portion being sized and configured to receive at least a portion of the second weight, the first receiving portion being spaced apart from the second receiving portion; and

a rim positioned proximate the front portion of the backboard, the rim being spaced apart from the first weight and the second weight;

wherein the first weight and the second weight are sized and configured to enhance the rebounding characteristics of the backboard.

Re. : Response to Advisory Office Action Mailed December 1, 2005

2. (Previously Presented) The basketball goal assembly as in Claim 1, wherein the first receiving portion is at least partially disposed within a first internal portion of the backboard and wherein the second receiving portions is at least partially disposed within a second internal portion of the backboard.

3. (Previously Presented) The basketball goal assembly as in Claim 1, wherein the first receiving portion includes a first opening in the backboard and wherein the second receiving portion includes a second opening in the backboard, the first weight being at least partially disposed within the first opening and the second weight being at least partially disposed within the second opening.

4. (Original) The basketball goal assembly as in Claim 1, wherein the first weight generally comprises a first sleeve that is attached to a first edge of the backboard and the second weight generally comprises a second sleeve that is attached to a second edge of the backboard.

5. (Original) The basketball goal assembly as in Claim 4, further comprising a first groove and a second groove disposed proximate the first side of the backboard and a first groove and a second groove disposed proximate the second side of the backboard, a first portion of the first weight being at least partially disposed within the first groove disposed proximate the first side of the backboard and a second portion of the first weight being at least partially disposed within the second groove disposed proximate the first side of the backboard, a first

portion of the second weight being at least partially disposed within the first groove disposed proximate the second side of the backboard and a second portion of the second weight being at least partially disposed within the second groove disposed proximate the second side of the backboard.

6. (Original) The basketball goal assembly as in Claim 1, wherein at least a portion of the backboard is constructed from blow-molded plastic.

7. (Original) The basketball goal assembly as in Claim 1, wherein the first weight and the second weight are constructed from generally rigid materials that are sized and configured to increase the rigidity of the backboard.

8. (Original) The basketball goal assembly as in Claim 1, further comprising a reinforcement structure attached to the backboard, at least a portion of the reinforcement structure generally extending from the first side to the second side of the backboard.

9. (Original) The basketball goal assembly as in Claim 1, further comprising a reinforcement structure generally disposed about the periphery of the backboard.

10. (Original) The basketball goal assembly as in Claim 1, further comprising a reinforcement structure attached to the backboard, the first weight forming at least a first portion of a reinforcement structure and the second weight forming at least a second portion of the

reinforcement structure.

11. (Original) The basketball goal assembly as in Claim 10, wherein the reinforcement structure includes an elongated member that generally extends from the first side to the second side of the backboard.

12. (Original) The basketball goal assembly as in Claim 10, wherein the reinforcement structure is generally disposed about the periphery of the backboard.

13. (Original) The basketball goal assembly as in Claim 1, wherein the first weight is removably connected to the first side of the backboard and the second weight is removably connected to the second side of the backboard.

14. (Previously Presented) A basketball backboard comprising:

- a support frame including a first side and a second side;
- a first attachment portion in the first side of the support frame;
- a second attachment portion in the second side of the support frame;
- a rebound member attached to the support frame;
- a first weight that is sized and configured to be attached to the first attachment portion in the first side of the support frame, the first weight being sized and configured to enhance the rebounding characteristics of the basketball backboard; and
- a second weight that is sized and configured to be attached to the second

attachment portion in the second side of the support frame, the second weight being sized and configured to enhance the rebounding characteristics of the basketball backboard.

15. (Previously Presented) The basketball backboard as in Claim 14, wherein the first attachment portion is at least partially disposed within a first internal portion of the support frame and wherein the second attachment portion is at least partially disposed within a second internal portion of the support frame.

16. (Previously Presented) The basketball backboard as in Claim 14, wherein the first attachment portion includes a first opening in the support frame and wherein the second attachment portion includes a second opening in the support frame.

17. (Original) The basketball backboard as in Claim 14, wherein the first weight generally comprises a first sleeve that is attached to a first edge of the support frame and the second weight generally comprises a second sleeve that is attached to a second edge of the support frame.

18. (Original) The basketball backboard as in Claim 14, wherein at least a portion of the support frame is constructed from blow-molded plastic.

19. (Original) The basketball backboard as in Claim 14, further comprising a reinforcement structure attached to the support frame, at least a portion of the reinforcement

structure generally extending from the first side to the second side of the support frame.

20. (Original) The basketball backboard as in Claim 14, further comprising a reinforcement structure generally disposed about the periphery of the support frame.

21. (Original) The basketball backboard as in Claim 14, further comprising a reinforcement structure attached to the support frame, the first weight forming at least a first portion of a reinforcement structure and the second weight forming at least a second portion of the reinforcement structure.

22. (Original) The basketball backboard as in Claim 21, wherein the reinforcement structure includes an elongated member that generally extends from the first side to the second side of the support frame.

23. (Original) The basketball backboard as in Claim 21, wherein the reinforcement structure is generally disposed about the periphery of the support frame.

24. (Previously Presented) A basketball goal assembly comprising:

a backboard including a front portion and a rear portion;

a first weight that is separate and discrete from the backboard, the first weight being sized and configured to be attached to a first portion of the backboard, the first weight being sized and configured to enhance the rebounding performance of the backboard; and

a second weight that is separate and discrete from the backboard, the second weight being sized and configured to be attached to a second portion of the backboard, the first portion of the backboard being spaced apart from the second portion of the backboard, the second weight being sized and configured to enhance the rebounding performance of the backboard.

25. (Previously Presented) The basketball goal assembly as in Claim 24, further comprising a first interior portion of the backboard and a second interior portion of the backboard, the first weight being at least partially disposed within the first interior portion of the backboard and the second weight being at least partially disposed within the second interior portion of the backboard.

26. (Original) The basketball goal assembly as in Claim 24, further comprising a first opening in the backboard and a second opening in the backboard, the first weight being at least partially disposed within the first opening and the second weight being at least partially disposed within the second opening.

27. (Original) The basketball goal assembly as in Claim 24, wherein the first weight generally comprises a first sleeve that is attached to a first edge of the backboard and the second weight generally comprises a second sleeve that is attached to a second edge of the backboard.

28. (Original) The basketball goal assembly as in Claim 27, further comprising a first groove and a second groove disposed proximate a first side of the backboard and a first groove and a second groove disposed proximate a second side of the backboard, a first portion of the first weight being at least partially disposed within the first groove disposed proximate the first side of the backboard and a second portion of the first weight being at least partially disposed within the second groove disposed proximate the first side of the backboard, a first portion of the second weight being at least partially disposed within the first groove disposed proximate the second side of the backboard and a second portion of the second weight being at least partially disposed within the second groove disposed proximate the second side of the backboard.

29. (Original) The basketball goal assembly as in Claim 24, wherein at least a portion of the backboard is constructed from blow-molded plastic.

30. (Original) The basketball goal assembly as in Claim 24, wherein the first weight and the second weight are constructed from generally rigid materials that are sized and configured to increase the rigidity of the backboard.
